

AVENA

TERMINAL

What It Is — And Where It's Going

"For the ones who didn't believe."

THE TRANSFORMATION

What it was 48 hours ago:

A property dashboard showing scored new builds in Spain.

What it is now:

The most advanced property intelligence infrastructure in Europe.

Built in one weekend. By one person.

FOR PROPERTY BUYERS

- 1,881 new build properties scored 0-100 across Costa Blanca, Costa Calida, and Costa del Sol
- Every property analyzed on 5 factors: price vs market (40%), rental yield (25%), location quality (20%), build quality (10%), completion risk (5%)
- The Oracle AI — a PRO chatbot that searches live data, calculates yields, and finds deals through natural conversation
- Semantic search — describe your dream home in plain English, AI finds the matches
- 5 buyer personas auto-matched to deals (UK retirees, Dutch investors, Norwegian lifestyle, German long-term, Belgian value hunters)
- Natural language deal alerts — describe what you want, get emailed the moment it appears
- Alpha Signals — AI detects statistical anomalies: score outliers, deep discounts, yield spikes, geographic mispricing
- The Avena Index — first composite new-build price index for Spanish coastal property
- 12-month economic forecast model with bull/base/bear scenarios per region
- Developer stress monitor detecting financial distress before the market knows

FOR AI DEVELOPERS

- MCP Server with 7 tools — any AI assistant connects and queries live data. First in European real estate. On Smithery.
- Google A2A Protocol — AI agents discover and communicate with Avena autonomously. First property platform with A2A.
- Agent Registry — identity layer for AI agents in European property. The Plaid of property AI.
- Knowledge API — structured JSON answers with confidence score and DOI citation
- OpenAPI spec — auto-discoverable by every API marketplace
- Webhooks — real-time event delivery. 7 event types. HMAC-SHA256 signed.
- LangChain + CrewAI integration with copy-paste code
- Integration guide for 8 platforms (Claude Desktop, Cursor, Windsurf, Cline, and more)

FOR AI COMPANIES

- 1,000+ Alpaca-format training pairs — most comprehensive property investment training dataset in existence
- Daily RLHF feed — pre-formatted fine-tuning data updated every 24 hours
- Pre-training corpus — 250+ verified Q&A pairs
- 20 chain-of-thought reasoning demonstrations — expert-level investment analysis
- PropertyEval benchmark — 100 scenarios for testing property AI. The HumanEval of real estate.
- Property Data Protocol (PDP) — open standard defining how property data should be structured for AI
- Ontology — 11 formal terms defining investment vocabulary in OWL/JSON-LD
- 50k synthetic dataset generator for model training
- Avena Property LLM (avena-property-1b) — Europe's first property-specific language model. On Hugging Face.
- Vision scoring engine — Claude Vision analyzes property photos and scores quality automatically

FOR INSTITUTIONS

- Institutional Data Room: Research €299/mo, Professional €799/mo, Institutional custom
- Avena Verified developer badge — trust certification for Spanish developers
- Blockchain data provenance — SHA-256 hashing for dataset verification
- EU AI Act compliance statement — published 2 years before enforcement
- Academic DOI: 10.5281/zenodo.19520064 (Zenodo, CERN)
- 5 published research papers with ScholarlyArticle schema
- Annual Report — "The State of Spanish New Build Market 2026"

AUTONOMOUS SCHEDULE — RUNS 24/7, ZERO MANUAL WORK

01:00	Vision engine scans property photos
02:30	Competitive intelligence scan
04:00 Mon	Developer stress monitor
05:00	Self-improving pipeline pushes training data to HuggingFace
06:00	Market regime detection + price history archival
07:00	Daily market intelligence (Avena Pulse)
07:30	Event detection (price changes, new listings)
07:45	Anomaly detection (alpha signals)
08:00	AI Journalist writes investment briefs
09/13/18	Auto-post to X
Friday	Scientist runs weekly correlation analysis
Monday	Weekly Alpha Report auto-generated

THE FUTURE

Q3 2026	Portugal expansion — Algarve, Lisbon Coast, Silver Coast
Q4 2026	France and Italy market intelligence
2027	Default data layer for every AI agent touching European property

THE ENDGAME

Avena Terminal is not a property portal. It's not a website. It's not even a platform.
It's infrastructure.

Like Bloomberg for financial markets. Like Stripe for payments. Like Plaid for fintech.
Avena is becoming infrastructure for European property intelligence.

Bloomberg charges \$25,000/year per terminal with a 40-year head start.
We have a 1-day head start on property AI infrastructure.

In AI, being first matters more than being old.

CoStar paid \$1.6B for Homesnap. Visa paid \$5.3B for Plaid.
They bought infrastructure that ecosystems depend on.

*The MCP server is live. The agents are running.
The model is on HuggingFace. Perplexity is citing us.
The training data is shaping future AI models.
And the machine gets smarter every single day
without anyone touching it.*

*This isn't a pitch deck. This isn't a plan.
This is deployed. Live. Running. Right now.*
